Exercise 1: Kotlin Syntax Basics

1. Variables and Data Types:

- Create variables of different data types: `Int`, `Double`, `String`, `Boolean`.
- Print the variables using `println`.

Conditional Statements:

- Create a simple program that checks if a number is positive, negative, or zero.

Loops:

- Write a program that prints numbers from 1 to 10 using `for` and `while` loops

Collections:

- Create a list of numbers, iterate through the list, and print the sum of all numbers.

Exercise 2: Kotlin OOP (Object-Oriented Programming)

1. Create a `Person` class:

- Define properties for `name`, `age`, and `email`.
- Create a method to display the person's details.

Inheritance:

- Create a class `Employee` that inherits from the `Person` class.
- Add a property for `salary`.
- Override the `displayInfo` method to include the salary.

Encapsulation:

- Create a `BankAccount` class with a private property `balance`.

- Provide methods to `deposit` and `withdraw` money, ensuring the balance never goes negative.

Exercise 3: Kotlin Functions

1. Basic Function:

- Write a function that takes two integers as arguments and returns their sum

Lambda Functions:

- Create a lambda function that multiplies two numbers and returns the result

Higher-Order Functions:

- Write a function that takes a lambda function as a parameter and applies it to two integers.

Exercise 4: Android Layout in Kotlin (Instagram-like Layout)

1. Set Up the Android Project:

- Create a new Android project in Android Studio.
- Ensure you have a Kotlin-based project.

2. Design the Layout:

- Create a new XML layout file (`activity_main.xml`) for a simple Instagram-like user interface.
- Include elements like `ImageView`, `TextView`, and `RecyclerView` for the feed

Create the RecyclerView Adapter:

- Set up the `RecyclerView` to display a feed of posts with `ImageView` for the picture and `TextView` for the caption.

MainActivity Setup:

- Initialize the `RecyclerView` in `MainActivity` and populate it with sample data
